PERSONAL PROJECTS

Graph-Zen (01/2022 - 01/2022)
- A Portal where you can build charts by uploading data through excel/csv. You can also embed these interactive charts in tools like notion/medium. Demo Link | Github

Assets Mania (01/2021 - 01/2021)
- An image crawler, where you can crawl images from any website you pass as a URL. I have used puppeteer to crawl the website and also use backend caching with the help of Redis. Github | Demo Link

TechPen (01/2021 - 01/2021)
- An all-in-one frontend editor for quick prototyping and coding your designs in HTML, CSS, and JS simultaneously. Github | Demo Link

TechTypo (01/2021 - 01/2021)
- A typing test application made using React Js to check your typing speed, accuracy, and improve your typing over time with historical tracking. | Github | Demo Link

CodeStock Online IDE (06/2020 - Present)
- An online Code Editor where one can compile in several languages like Python, C, C++, C#, etc.
- Used CodeMirror for syntax highlighting and basic UI, Noty for notification, HackerEarth Compiler API, AntDesign for UI
- Client-side file creation and downloading. used local storage to store the user's preferred language, session storage to store the written code | Demo Link

RecipeHunt — Recipe Search Engine (02/2020 - 02/2020)
- A React PWA and search engine where you can search for different Recipes by recipe name/type/ingredient which is powered by Edamam Recipe API | Demo Link | GitHub
